

The phase diagram of quantum gravity

from diffeomorphism-invariant RG flows

Jan M. Pawłowski
Universität Heidelberg & ExtreMe Matter Institute

Asymptotic safety seminar, May 4th 2012

Phase diagram of quantum gravity

early universe

$$g_N(E) \quad \lambda(E)$$

rotation curves

IR stability

UV stability

Functional approach to quantum gravity

Functional approach to quantum gravity

- **Einstein-Hilbert action**

Metric g

Cosmological constant Λ

$$S[g] = \frac{1}{16\pi G_N} \int d^4x \sqrt{g} \left(-R(g) + 2\Lambda \right)$$

Newton constant G_N

Ricci scalar $R(g)$

Functional approach to quantum gravity

- **Einstein-Hilbert action**

$$S[g] = \frac{1}{16\pi G_N} \int d^4x \sqrt{g} \left(-R(g) + 2\Lambda \right)$$

- **Momentum dimension of couplings**

$$\dim G_N = -2$$

perturbatively non-renormalisable

$$\dim \Lambda = 2$$

Functional approach to quantum gravity

- **correlation functions, e.g.**

$$\langle R(g(x_1)) \cdots R(g(x_n)) \rangle$$

- **fundamental correlation functions (gauge-fixed)**

$$\langle g(x_1) \cdots g(x_n) \rangle$$

not diffeomorphism-invariant

- **background formalism**

$$g = \bar{g} + h$$

background metric

fluctuation

Functional approach to quantum gravity

- **correlation functions, e.g.**

$$\langle R(g(x_1)) \cdots R(g(x_n)) \rangle$$

- **fundamental correlation functions (gauge-fixed)**

$$\langle g(x_1) \cdots g(x_n) \rangle$$

not diffeomorphism-invariant

- **background formalism**

$$\langle h(x_1) \cdots h(x_n) \rangle$$

$$g = \bar{g} + h$$

fluctuation

background metric

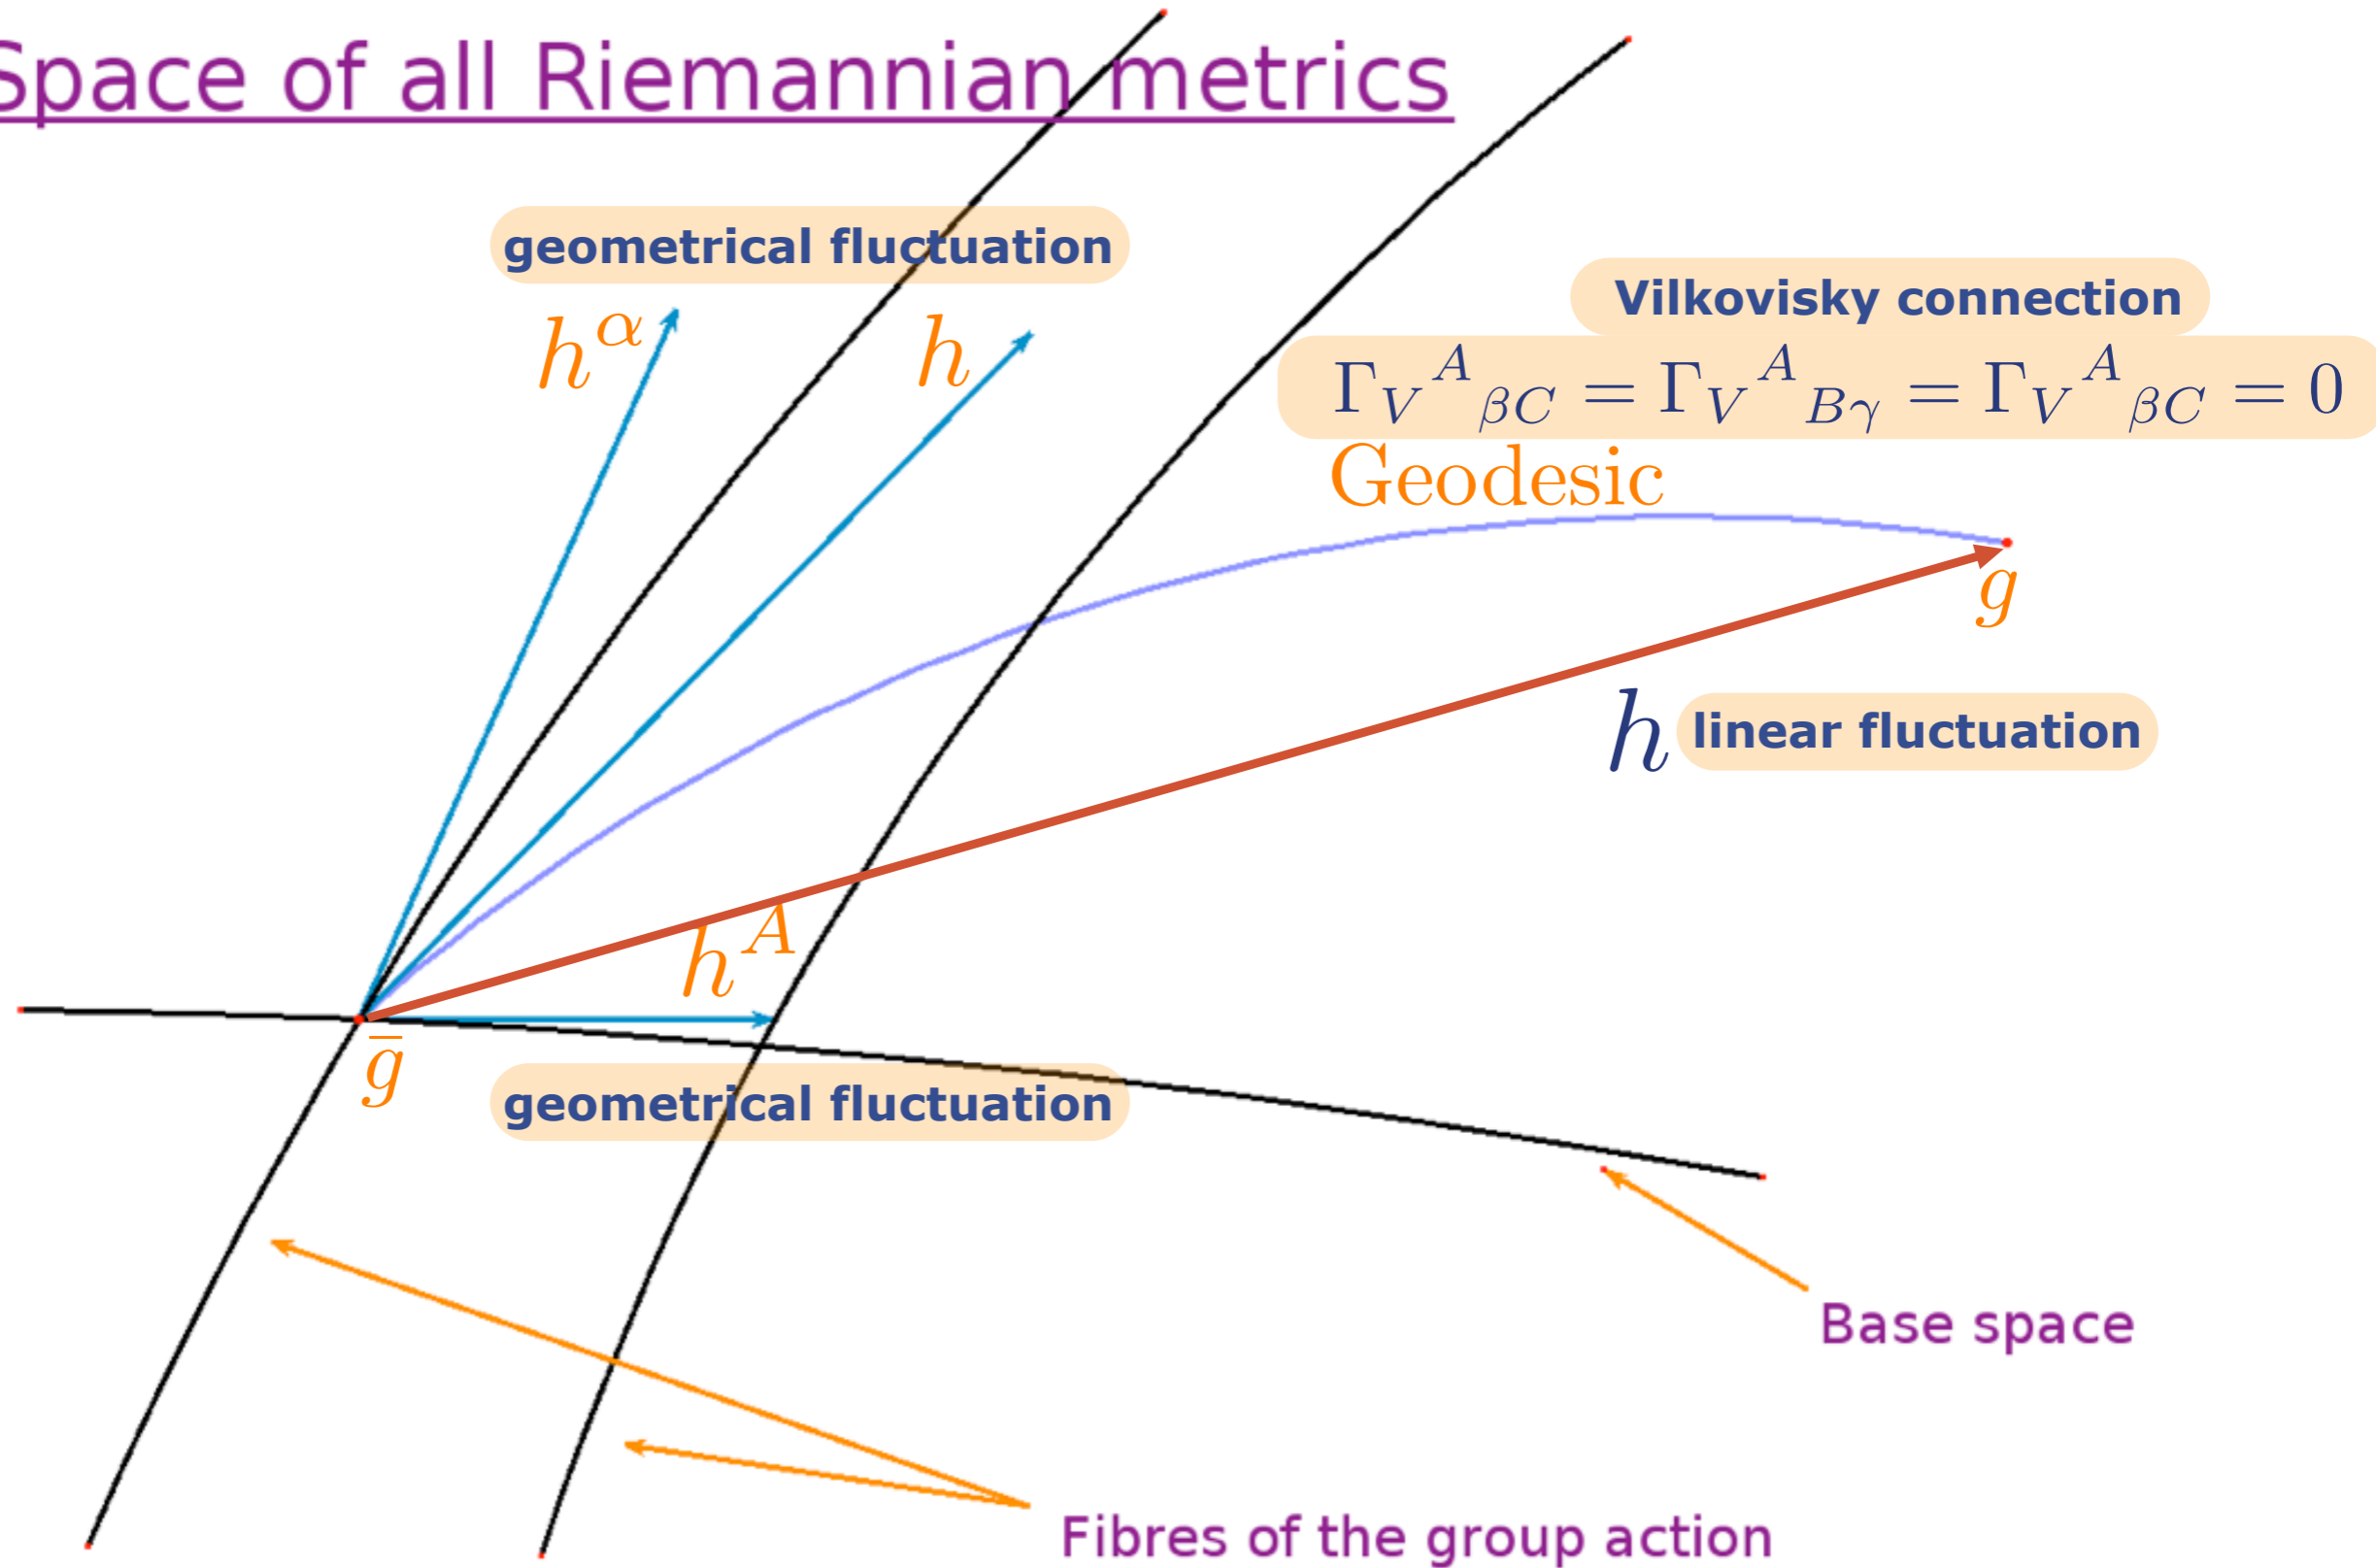

not background independent

not diffeomorphism-invariant

Functional approach to quantum gravity

geometrical approach

Space of all Riemannian metrics

Functional approach to quantum gravity

geometrical approach

▪ Einstein-Hilbert action

$$S[h^A] = \frac{1}{16\pi G_N} \int d^4x \sqrt{g(h^A)} \left(-R(g(h^A)) + 2\Lambda \right)$$

no gauge fixing

effective action

$$\Gamma = \Gamma[\langle h^A \rangle]$$

Functional approach to quantum gravity

geometrical approach

▪ Einstein-Hilbert action

$$S[h^A] = \frac{1}{16\pi G_N} \int d^4x \sqrt{g(h^A)} \left(-R(g(h^A)) + 2\Lambda \right)$$

no gauge fixing

effective action

$$\Gamma = \Gamma[\langle h^A \rangle]$$

▪ correlation functions at $\langle h \rangle = 0$

$$g = \bar{g} + \Delta g(h)$$

background metric

fluctuation

Functional approach to quantum gravity

geometrical approach

▪ Einstein-Hilbert action

$$S[h^A] = \frac{1}{16\pi G_N} \int d^4x \sqrt{g(h^A)} \left(-R(g(h^A)) + 2\Lambda \right)$$

no gauge fixing

effective action

$$\Gamma = \Gamma[\langle h^A \rangle]$$

▪ correlation functions at $\langle h \rangle = 0$

$$\langle h^{A_1} \dots h^{A_n} \rangle$$

$$g = \bar{g} + \Delta g(h)$$

fluctuation

background metric

background independent

diffeomorphism-invariant

Functional approach to quantum gravity

Functional RG

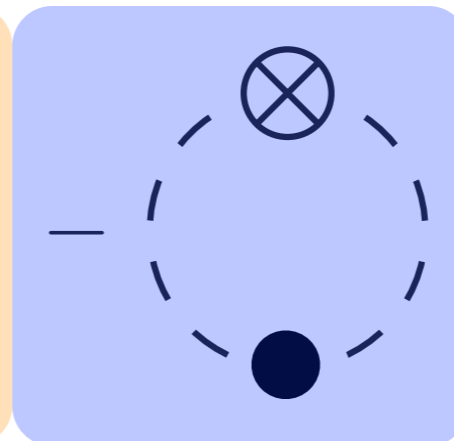

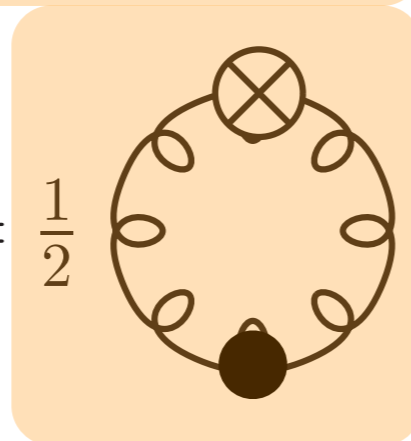

RG-scale k : $t = \ln k$

graviton fluctuations

$$\partial_t \Gamma_k[\phi] = \frac{1}{2}$$

free energy

ghost fluctuations

Reuter '96

geometrical approach

Branchina, Meissner, Veneziano '03
JMP '03

$$\phi = (h^A, C, \bar{C})$$

fully diffeomorphism invariant

Functional approach to quantum gravity

Functional RG

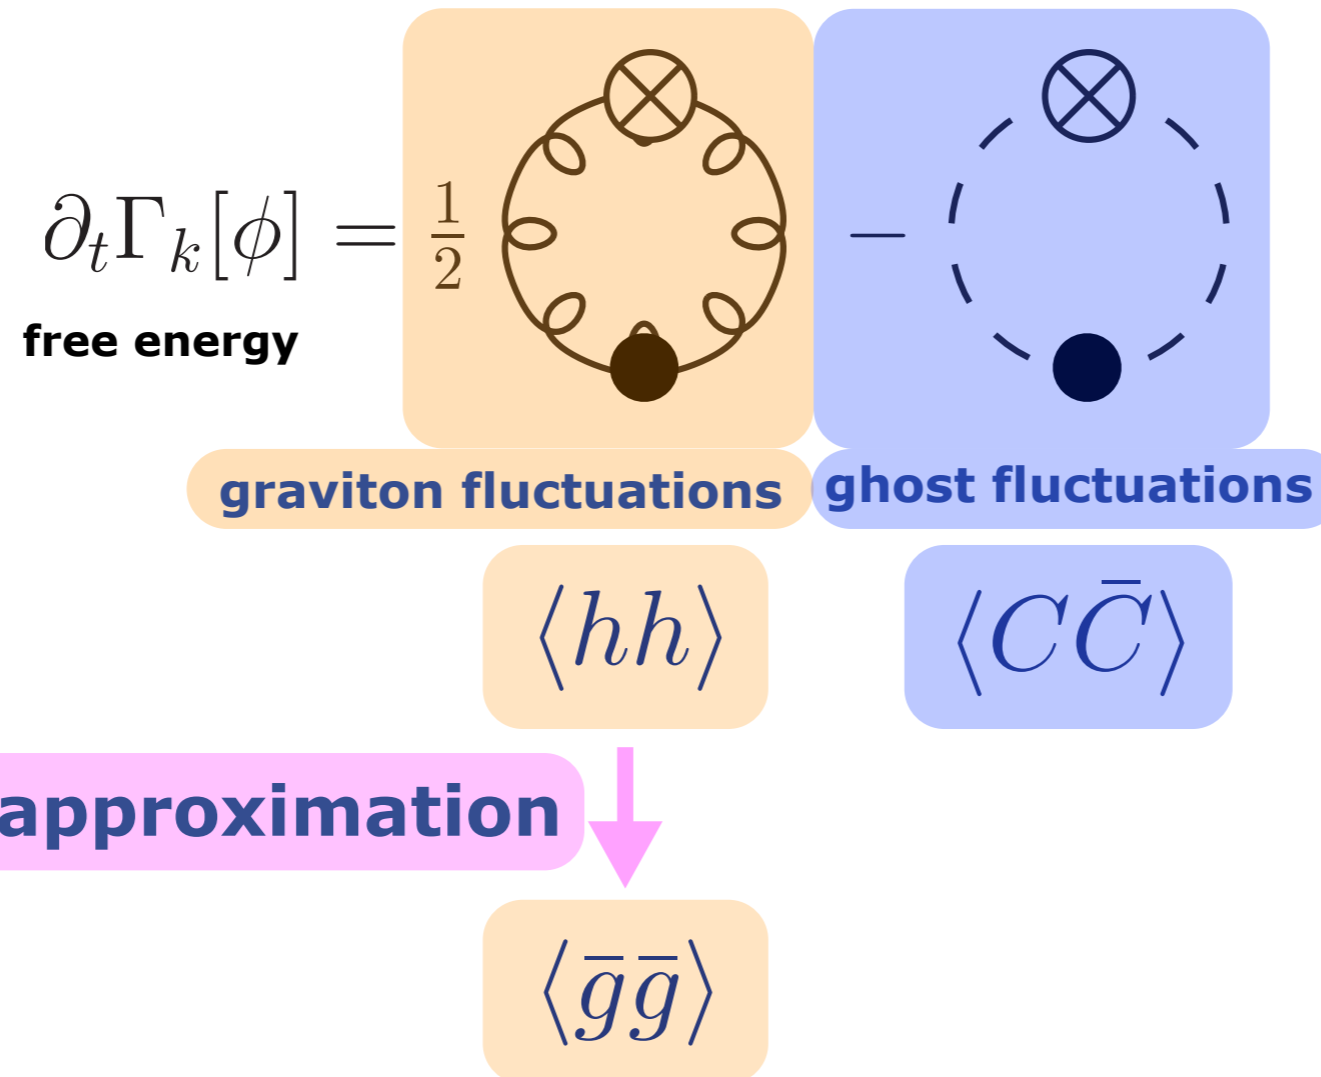

$$\partial_t \Gamma_k[\phi] = \frac{1}{2} \left(\text{graviton fluctuations} - \text{ghost fluctuations} \right)$$

free energy

$\langle hh \rangle$ $\langle C\bar{C} \rangle$

Functional approach to quantum gravity

Functional RG

Bi-metric approach

Manrique, Reuter, Saueressig '10

▪ potentially dangerous for

- in Yang-Mills theory: sign of beta function & confinement

Litim, JMP '02 & Braun, Gies, JMP '07

- in Yang-Mills gravity system: stability at stake

Folkerts, Litim, JMP '11

Functional approach to quantum gravity

Geometrical RG

JMP '03

Donkin, JMP, arXiv:1203.4207

$$\partial_t \Gamma_k[\phi] = \frac{1}{2} \left(\text{graviton fluctuations} - \text{ghost fluctuations} \right)$$

free energy

$\langle hh \rangle$ $\langle C\bar{C} \rangle$

Nielsen identities

$$\frac{\delta \Gamma}{\delta \bar{g}} = \langle Dh \rangle * \frac{\delta \Gamma}{\delta \langle h \rangle} + \text{cut-off terms}$$

Dh covariant derivative with Γ_V

Functional approach to quantum gravity

Geometrical RG

Extended Einstein-Hilbert approximation

Donkin, JMP, arXiv:1203.4207

$$\Gamma_k[\bar{g}; h, \bar{C}, C] = \Gamma_{\text{EH}}[g; \bar{C}, C; \bar{G}_N, \bar{\Lambda}] + \Delta\Gamma[\bar{g}; h]$$

$$\Delta\Gamma[\bar{g}; h] = \Delta\Gamma_1 + \Delta\Gamma_2 = \Delta\Gamma^a h_a + \frac{1}{2} \Delta\Gamma^{ab} h_a h_b$$

$$\Gamma_{\text{EH}}^{ab} + \Delta\Gamma^{ab} = \Gamma_{\text{EH}}^{ab} \Big|_{G_N, \Lambda}$$

Nielsen identities

$$\frac{\delta\Gamma}{\delta\bar{g}} = \langle Dh \rangle * \frac{\delta\Gamma}{\delta\langle h \rangle} + \text{cut-off terms}$$

Dh covariant derivative with Γ_V

Functional approach to quantum gravity

Geometrical RG

- **dimensionless couplings with $E \sim k$**

$$g_N = k^{d-2} G_N$$

$$\lambda = \frac{\Lambda}{k^2}$$

Functional approach to quantum gravity

Geometrical RG

- dimensionless couplings with $E \sim k$

$$g_N = k^{d-2} G_N$$

$$\lambda = \frac{\Lambda}{k^2}$$

- RG-flows

$$\partial_t g_N + (2 - d)g_N = F_g(g_N, \lambda)$$

$$\partial_t \lambda + (2 - \eta_N)\lambda = F_\lambda(g_N, \lambda)$$

$$\partial_t \Gamma[\bar{g}, h; \bar{g}_N, \bar{\lambda}] = \frac{1}{2} \left(\text{Diagram 1} - \text{Diagram 2} \right) (g_N, \Lambda)$$

Phase diagram of quantum gravity
