

Seminar “Physics of Viruses”

Falko Ziebert, Ulrich Schwarz and Frederik Graw

Summer term 2021

This seminar will introduce approaches from physics and mathematics to analyze viruses and viral infections. Participants are expected to select one of the topics listed below based on the corresponding papers. They should also further research the subject on their own for more papers of this kind. The different topics should be presented ideally in teams of two in a 30 min talk with a clear focus on the most important concepts and results. Please avoid unnecessary details and focus on the main messages. The topics comprise different aspects of the viral life cycle and the infection dynamics, including characterizing viral structure, the kinetics of virus assembly, entry, exit, spread, mitigation strategies and viral evolution.

Nr.	Topic
1.	Early work on capsids (a) Crick, Francis HC, and James D. Watson. "Structure of small viruses." <i>Nature</i> (1956): 473-75 (b) Caspar, Donald LD, and Aaron Klug. "Physical principles in the construction of regular viruses." <i>Cold Spring Harbor Symposia on Quantitative Biology</i> . Vol. 27. Cold Spring Harbor Laboratory Press, 1962
2.	Symmetry of virus capsids (a) Zandi, Roya, et al. "Origin of icosahedral symmetry in viruses." <i>Proceedings of the National Academy of Sciences</i> 101.44 (2004): 15556-60 (b) Lorman, V. L., and S. B. Rochal. "Landau theory of crystallization and the capsid structures of small icosahedral viruses." <i>Physical Review B</i> 77.22 (2008): 224109 (c) Twarock, Reidun, and Antoni Luque. "Structural puzzles in virology solved with an overarching icosahedral design principle." <i>Nature communications</i> 10.1 (2019): 1-9.
3.	Assembly - energy considerations (a) Perlmutter, Jason D., and Michael F. Hagan. "Mechanisms of virus assembly." <i>Annual review of physical chemistry</i> 66 (2015): 217-239. (b) Zlotnick, Adam. "To build a virus capsid: an equilibrium model of the self assembly of polyhedral protein complexes." <i>Journal of Molecular Biology</i> 241.1 (1994): 59-67 (c) Bruinsma, Robijn F., et al. "Viral self-assembly as a thermodynamic process." <i>Physical review letters</i> 90.24 (2003): 248101. (d) Zandi, Roya, et al. "Classical nucleation theory of virus capsids." <i>Biophysical journal</i> 90.6 (2006): 1939-1948.
4.	Assembly - computer simulations (a) Hagan, Michael F., and David Chandler. "Dynamic pathways for viral capsid assembly." <i>Biophysical Journal</i> 91.1 (2006): 42-54 (b) Rapaport, D. C. "Self-assembly of polyhedral shells: a molecular dynamics study." <i>Physical Review E</i> 70.5 (2004): 051905. (c) Baschek, Johanna E., Heinrich CR Klein, and Ulrich S. Schwarz. "Stochastic dynamics of virus capsid formation: direct versus hierarchical self-assembly." <i>BMC biophysics</i> 5.1 (2012): 22.

5.	Assembly – experiments (a) Kler, Stanislav, et al. "RNA encapsidation by SV40-derived nanoparticles follows a rapid two-state mechanism." <i>Journal of the American Chemical Society</i> 134.21 (2012): 8823-8830. (b) Van Rosmalen, Mariska GM, et al. "Revealing in real-time a multistep assembly mechanism for SV40 virus-like particles." <i>Science advances</i> 6.16 (2020): eaaz1639.
6.	Genome organization (a) Purohit, Prashant K., Jané Kondev, and Rob Phillips. "Mechanics of DNA packaging in viruses." <i>Proc of the Nat. Acad. Of Sci.</i> 100.6 (2003): 3173-78. (b) Kindt, James, et al. "DNA packaging and ejection forces in bacteriophage." <i>Proceedings of the National Academy of Sciences</i> 98.24 (2001): 13671-13674. (c) Speir, Jeffrey A., and John E. Johnson. "Nucleic acid packaging in viruses." <i>Current opinion in structural biology</i> 22.1 (2012): 65-71.
7.	Virus entry by endocytosis (a) Deserno, Markus. "Elastic deformation of a fluid membrane upon colloid binding." <i>Physical Review E</i> 69.3 (2004): 031903 (b) Frey, Felix, Falko Ziebert, and Ulrich S. Schwarz. "Stochastic Dynamics of Nanoparticle and Virus Uptake." <i>Physical review letters</i> 122.8 (2019): 088102 (c) Frey, Felix, Falko Ziebert, and Ulrich S. Schwarz. "Dynamics of particle uptake at cell membranes." <i>Physical Review E</i> 100.5 (2019): 052403
8.	Virus entry by fusion (a) Chernomordik, Leonid V., and Michael M. Kozlov. "Mechanics of membrane fusion." <i>Nature structural & molecular biology</i> 15.7 (2008): 675-683. (b) White, Judith M., et al. "Structures and mechanisms of viral membrane fusion proteins: multiple variations on a common theme." <i>Critical reviews in biochemistry and molecular biology</i> 43.3 (2008): 189-219. (c) Ryham, Rolf J., et al. "Calculating transition energy barriers and characterizing activation states for steps of fusion." <i>Biophysical journal</i> 110.5 (2016): 1110-1124.
9.	Stoichiometry of HIV-uptake (a) Magnus C, Rusert P, Bonhoeffer S, Trkola A, Regoes RR. "Estimating the stoichiometry of human immunodeficiency virus entry." <i>J Virol.</i> 2009 Feb;83(3):1523-31 (b) Brandenberg, Oliver F., et al. "The HIV-1 entry process: a stoichiometric view." <i>Trends in Microbiology</i> 23.12 (2015): 763-74
10.	Structure of SARS-CoV-2 (a) Turoňová, Beata, et al. "In situ structural analysis of SARS-CoV-2 spike reveals flexibility mediated by three hinges." <i>Science</i> 370.6513 (2020): 203-208. (b) Ke, Zunlong, et al. "Structures and distributions of SARS-CoV-2 spike proteins on intact virions." <i>Nature</i> 588.7838 (2020): 498-502. (c) Klein, Steffen, et al. "SARS-CoV-2 structure and replication characterized by in situ cryo-electron tomography." <i>Nature communications</i> 11.1 (2020): 1-10. (d) Yao, Hangping, et al. "Molecular architecture of the SARS-CoV-2 virus." <i>Cell</i> 183.3 (2020): 730-738. (e) Casalino, Lorenzo, et al.
