Couplings Higgs EFT More EFTs

Theory in data-driven era

Same old theory motivation

- dark matter still not understood [WIMP still best choice]
- hierarchy problem (probably) a problem
- but: data in driving seat [remember 750]

Couplings Higgs EFT More EFTs

Theory in data-driven era

Same old theory motivation

- dark matter still not understood [WIMP still best choice]
- hierarchy problem (probably) a problem
- but: data in driving seat [remember 750]

Theory tool box

- Lagrangian language obvious after Higgs discovery
- 1 full new physics model [built to solve problems, extrapolating to high scales, think SUSY]
- 2 simplified models [Feynman diagrams for experimental features, theoretically poor at best]
- 3 effective Lagrangians [symmetries and particles fixed, non-renormalizable operators]
- \Rightarrow matter of experimental needs, convenience and taste

	effective Lagrangian	simplified models	full models
agnostic	(X)		
data-driven		(×)	(×)
theory-driven		(×)

Couplings Higgs EFT More EFTs

Higgs questions

1. What is the 'Higgs' Lagrangian?

- psychologically: looked for Higgs, so found a Higgs
- CP-even spin-0 scalar expected, which operators? spin-1 vector unlikely spin-2 graviton unexpected

- ask LHCb [Cabibbo-Maksymowicz-Dell'Aquila-Nelson angles, not part of talk]

Couplings Higgs EFT More EFTs

Higgs questions

- 1. What is the 'Higgs' Lagrangian?
 - psychologically: looked for Higgs, so found a Higgs
 - CP-even spin-0 scalar expected, which operators? spin-1 vector unlikely spin-2 graviton unexpected
 - ask LHCb [Cabibbo-Maksymowicz-Dell'Aquila-Nelson angles, not part of talk]

2. What is the Lagrangian?

- naive-but-useful: set of 'couplings' given Lagrangian
- bottom-up: effective theory [simplified models?]
- top-down: modified Higgs sectors

Couplings Higgs EFT More EFTs

D6 dark matter operators

Combining direct, indirect, collider results for WIMPs [Tait etal]

- choose dark matter candidate [Majorana/Dirac fermion, scalar, dark photon]
- consider D6 scattering process $\chi\chi \rightarrow$ SM SM
- relic density from annihilation $[m_{\chi}/\tau \sim 30]$
- indirect detection even later
- direct detection non-relativistic $[E \sim 10 \text{ MeV}]$
- LHC tricky: single scale $m_\chi \ll m_{
 m mediator}$?
- example: scalar dark matter

Questions

Where we stand with LHC theory

Is it really the Standard Model Higgs? [no] Is there WIMP dark matter? [yes] Is there TeV-scale physics beyond the Standard Model? [yes] Are EFT analyses boring? [totally] Are there nice theory aspects to work on? [plenty] Will I stop doing EFT once we find new states? [definitely] ⇒ Welcome to a data-driven era! [it sucks]
